Phone	9887779477
Project Overview:	Zomato, a leading restaurant aggregator and food delivery service, operates across multiple countries, helping users discover restaurants, review ratings, and place orders. With increasing competition in the restaurant and food delivery industry, Zomato aims to enhance its decision-making capabilities through data-driven insights about its restaurant partners, customer preferences, and service performance.
Task 1	Task 1: Cleaning the Dataset for Accurate Restaurant Listings <ul style="list-style-type: none"> • Scenario: Zomato's dataset contains duplicate entries and missing values. Learners will clean the data, ensuring all future analyses is based on reliable information. • Steps: Remove duplicates, handle missing values, and ensure the dataset is prepared for further analysis. • Deliverable: A clean dataset, free from duplicates and missing values, forming a reliable foundation for subsequent tasks.
Solution Task 1	Remove duplicates Data tab → Remove Duplicates. 

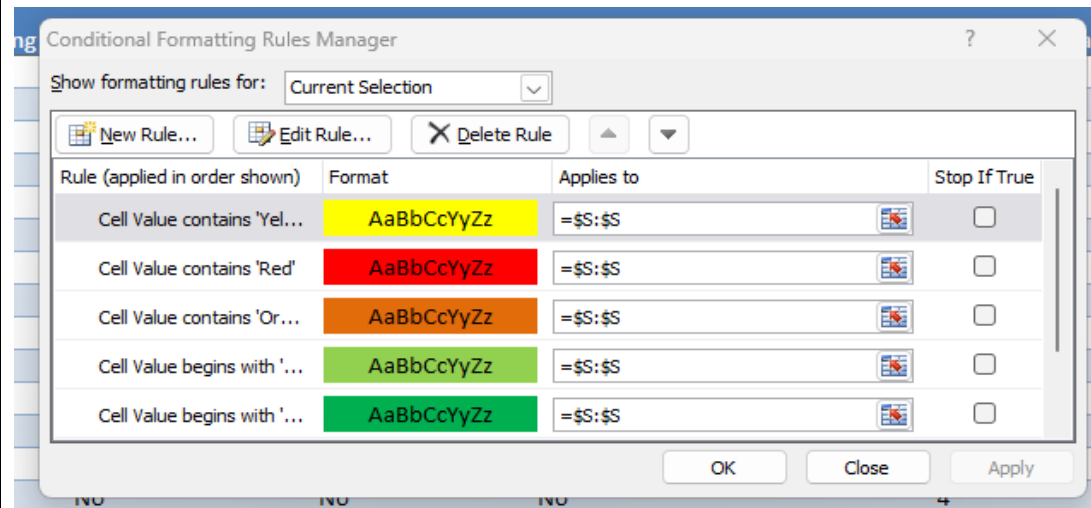

Find and select blank cells

Home tab → Find and Select → Go to Special → Blanks and click OK which highlights all blank cells.

Format data

Format the data to as per given formats. Do Freeze Panes to scroll with ease. Do Conditional Formatting for Rating.

Task 2	Task -2 Categorizing Restaurants by Customer Ratings Scenario: Zomato wants to categorize restaurants based on customer ratings to identify top and underperforming venues. Steps: Categorize restaurants into rating groups (Excellent, Good, Average, Poor), and summarize performance by rating. Deliverable: A summary table categorizing restaurant performance based on customer ratings.																		
Solution Task 2	<table border="1"> <thead> <tr> <th>Row Labels</th><th>No of Restaurants</th></tr> </thead> <tbody> <tr> <td>Average</td><td>3737</td></tr> <tr> <td>Excellent</td><td>301</td></tr> <tr> <td>Good</td><td>2100</td></tr> <tr> <td>Not rated</td><td>2148</td></tr> <tr> <td>Poor</td><td>186</td></tr> <tr> <td>Very Good</td><td>1079</td></tr> <tr> <td>(blank)</td><td></td></tr> <tr> <td>Grand Total</td><td>9551</td></tr> </tbody> </table>	Row Labels	No of Restaurants	Average	3737	Excellent	301	Good	2100	Not rated	2148	Poor	186	Very Good	1079	(blank)		Grand Total	9551
Row Labels	No of Restaurants																		
Average	3737																		
Excellent	301																		
Good	2100																		
Not rated	2148																		
Poor	186																		
Very Good	1079																		
(blank)																			
Grand Total	9551																		
Task 3	Task 3: Verifying Service Availability in Specific Cities (VLOOKUP) Scenario: Customers search for specific services, such as table booking or online delivery. Zomato needs to verify which restaurants in each city offer these services. Steps: Use VLOOKUP to match restaurants offering specific services. Deliverable: A table summarizing service availability across cities, including table booking and online delivery services.																		
Solution Task 3	<p>Have Created Drop Down List by using Data Tab → Data Validation→ Settings Allow "List"→ Select Cells of Restaurant names.</p> <p>Then used V look up to fetch columns as per value of Dropdown. User has to only enter Restaurant Name and other fields are fetched automatically by Vlookup.</p>																		

Enter Restaurant Name	Silantro Fil-Mex
Locality	Kapitolyo
Cuisines	Filipino, Mexican
Has Online delivery	No
Is delivering now	No
Has Table booking	No
Average Cost for two	800
Currency	Botswana Pula(P)

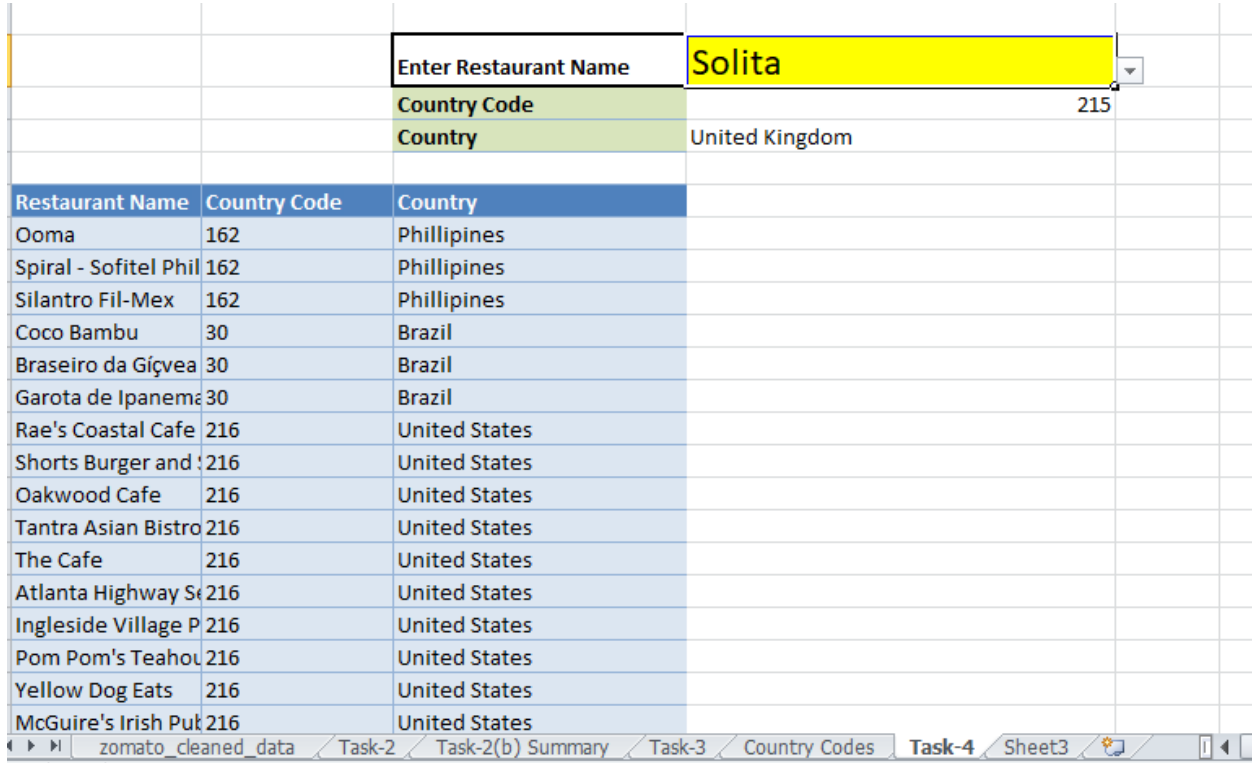

Enter Restaurant Name	Silantro Fil-Mex
Locality	Kapitolyo
Cuisines	Filipino, Mexican
Has Online delivery	=VLOOKUP(\$C\$2,zomato_cleaned_data!A:T,13,FALSE)
Is delivering now	No
Has Table booking	No
Average Cost for two	800
Currency	Botswana Pula(P)

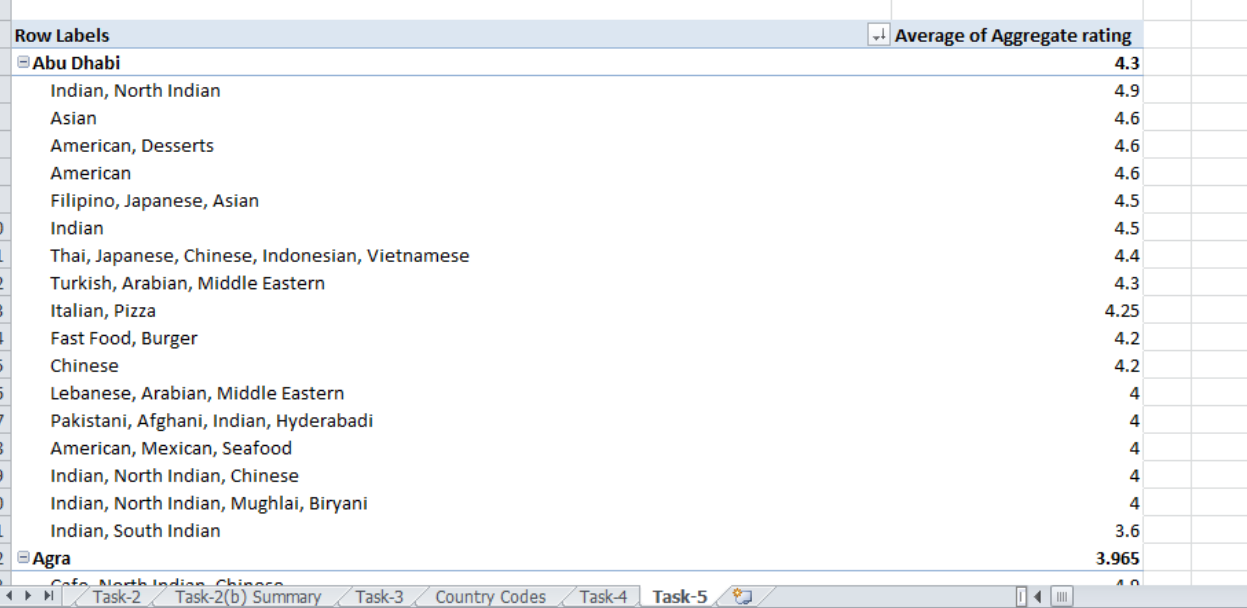

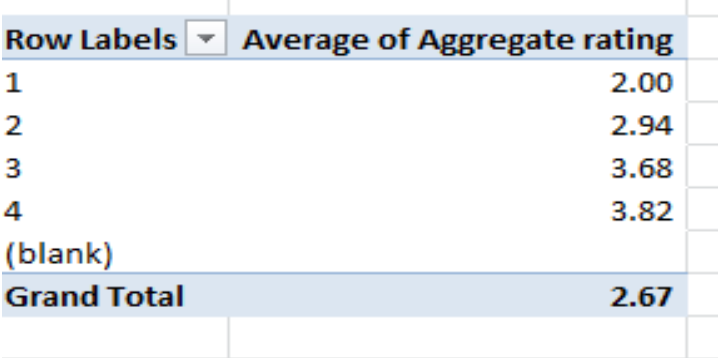

Task 4

Task 4: Cross-Referencing Country Codes for Restaurant Distribution (XLOOKUP)

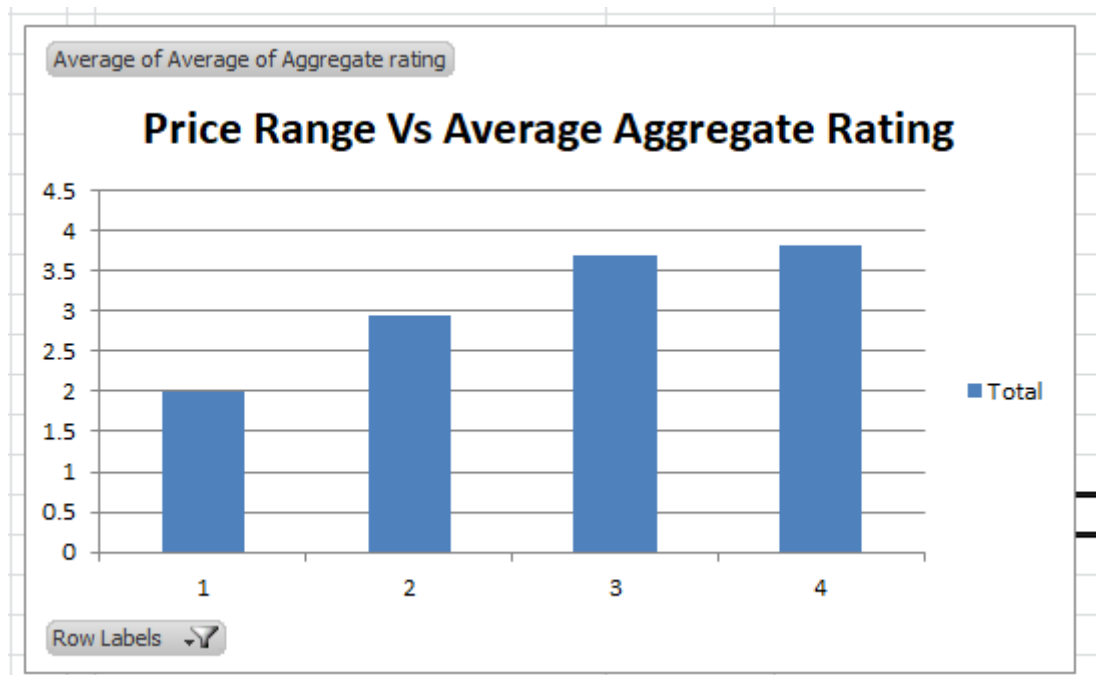

Scenario: As Zomato expands globally, learners will cross-reference country codes with country names to visualize geographic restaurant distribution.

Steps: Use XLOOKUP to map country codes with country names.

	Deliverable: A dataset showing the country name corresponding to each restaurant.																																																			
Solution Task 4	<p>I have Excel 2010 and hence do not have XLOOKUP but have used VLOOKUP to create dataset and a convenient dropdown menu.</p>  <table><tr><th>Restaurant Name</th><th>Country Code</th><th>Country</th></tr><tr><td>Ooma</td><td>162</td><td>Phillipines</td></tr><tr><td>Spiral - Sofitel Phil</td><td>162</td><td>Phillipines</td></tr><tr><td>Silantro Fil-Mex</td><td>162</td><td>Phillipines</td></tr><tr><td>Coco Bambu</td><td>30</td><td>Brazil</td></tr><tr><td>Braseiro da Gíçvea</td><td>30</td><td>Brazil</td></tr><tr><td>Garota de Ipanema</td><td>30</td><td>Brazil</td></tr><tr><td>Rae's Coastal Cafe</td><td>216</td><td>United States</td></tr><tr><td>Shorts Burger and</td><td>216</td><td>United States</td></tr><tr><td>Oakwood Cafe</td><td>216</td><td>United States</td></tr><tr><td>Tantra Asian Bistro</td><td>216</td><td>United States</td></tr><tr><td>The Cafe</td><td>216</td><td>United States</td></tr><tr><td>Atlanta Highway S</td><td>216</td><td>United States</td></tr><tr><td>Ingleside Village P</td><td>216</td><td>United States</td></tr><tr><td>Pom Pom's Teahou</td><td>216</td><td>United States</td></tr><tr><td>Yellow Dog Eats</td><td>216</td><td>United States</td></tr><tr><td>McGuire's Irish Pub</td><td>216</td><td>United States</td></tr></table>	Restaurant Name	Country Code	Country	Ooma	162	Phillipines	Spiral - Sofitel Phil	162	Phillipines	Silantro Fil-Mex	162	Phillipines	Coco Bambu	30	Brazil	Braseiro da Gíçvea	30	Brazil	Garota de Ipanema	30	Brazil	Rae's Coastal Cafe	216	United States	Shorts Burger and	216	United States	Oakwood Cafe	216	United States	Tantra Asian Bistro	216	United States	The Cafe	216	United States	Atlanta Highway S	216	United States	Ingleside Village P	216	United States	Pom Pom's Teahou	216	United States	Yellow Dog Eats	216	United States	McGuire's Irish Pub	216	United States
Restaurant Name	Country Code	Country

Garota de Ipanema	30	Brazil																																																		
Rae's Coastal Cafe	216	United States																																																		
Shorts Burger and	216	United States																																																		
Oakwood Cafe	216	United States																																																		
Tantra Asian Bistro	216	United States																																																		
The Cafe	216	United States																																																		
Atlanta Highway S	216	United States																																																		
Ingleside Village P	216	United States																																																		
Pom Pom's Teahou	216	United States																																																		
Yellow Dog Eats	216	United States																																																		
McGuire's Irish Pub	216	United States																																																		
Task 5	<p>Task 5: Analyzing Customer Preferences by Cuisine (INDEX-MATCH)</p> <p>Scenario: Zomato wants to understand customer preferences by cuisine type, helping optimize restaurant recommendations.</p> <p>Steps: Use INDEX-MATCH to analyze and cross-reference customer preferences by cuisine across cities.</p> <p>Deliverable: A summary of customer preferences by cuisine and city.</p>																																																			

Solution Task 5	 <table border="1"> <thead> <tr> <th>Row Labels</th> <th>Average of Aggregate rating</th> </tr> </thead> <tbody> <tr> <td>Abu Dhabi</td> <td>4.3</td> </tr> <tr> <td>Indian, North Indian</td> <td>4.9</td> </tr> <tr> <td>Asian</td> <td>4.6</td> </tr> <tr> <td>American, Desserts</td> <td>4.6</td> </tr> <tr> <td>American</td> <td>4.6</td> </tr> <tr> <td>Filipino, Japanese, Asian</td> <td>4.5</td> </tr> <tr> <td>Indian</td> <td>4.5</td> </tr> <tr> <td>Thai, Japanese, Chinese, Indonesian, Vietnamese</td> <td>4.4</td> </tr> <tr> <td>Turkish, Arabian, Middle Eastern</td> <td>4.3</td> </tr> <tr> <td>Italian, Pizza</td> <td>4.25</td> </tr> <tr> <td>Fast Food, Burger</td> <td>4.2</td> </tr> <tr> <td>Chinese</td> <td>4.2</td> </tr> <tr> <td>Lebanese, Arabian, Middle Eastern</td> <td>4</td> </tr> <tr> <td>Pakistani, Afghani, Indian, Hyderabad</td> <td>4</td> </tr> <tr> <td>American, Mexican, Seafood</td> <td>4</td> </tr> <tr> <td>Indian, North Indian, Chinese</td> <td>4</td> </tr> <tr> <td>Indian, North Indian, Mughlai, Biryani</td> <td>4</td> </tr> <tr> <td>Indian, South Indian</td> <td>3.6</td> </tr> <tr> <td>Agra</td> <td>3.965</td> </tr> </tbody> </table>	Row Labels	Average of Aggregate rating	Abu Dhabi	4.3	Indian, North Indian	4.9	Asian	4.6	American, Desserts	4.6	American	4.6	Filipino, Japanese, Asian	4.5	Indian	4.5	Thai, Japanese, Chinese, Indonesian, Vietnamese	4.4	Turkish, Arabian, Middle Eastern	4.3	Italian, Pizza	4.25	Fast Food, Burger	4.2	Chinese	4.2	Lebanese, Arabian, Middle Eastern	4	Pakistani, Afghani, Indian, Hyderabad	4	American, Mexican, Seafood	4	Indian, North Indian, Chinese	4	Indian, North Indian, Mughlai, Biryani	4	Indian, South Indian	3.6	Agra	3.965
Row Labels	Average of Aggregate rating																																								
Abu Dhabi	4.3																																								
Indian, North Indian	4.9																																								
Asian	4.6																																								
American, Desserts	4.6																																								
American	4.6																																								
Filipino, Japanese, Asian	4.5																																								
Indian	4.5																																								
Thai, Japanese, Chinese, Indonesian, Vietnamese	4.4																																								
Turkish, Arabian, Middle Eastern	4.3																																								
Italian, Pizza	4.25																																								
Fast Food, Burger	4.2																																								
Chinese	4.2																																								
Lebanese, Arabian, Middle Eastern	4																																								
Pakistani, Afghani, Indian, Hyderabad	4																																								
American, Mexican, Seafood	4																																								
Indian, North Indian, Chinese	4																																								
Indian, North Indian, Mughlai, Biryani	4																																								
Indian, South Indian	3.6																																								
Agra	3.965																																								
Task 6	<p>Task 6: Price Range and Ratings Analysis (Pivot Tables)</p> <p>Scenario: Learners will analyze how restaurant price ranges affect customer satisfaction, providing insight into pricing strategy.</p> <p>Steps: Use Pivot Tables to compare ratings by price range, and visualize using Pivot Charts.</p> <p>Deliverable: A Pivot Table showing restaurant ratings by price range, with accompanying charts.</p>																																								
Solution Task 6	 <table border="1"> <thead> <tr> <th>Row Labels</th> <th>Average of Aggregate rating</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>2.00</td> </tr> <tr> <td>2</td> <td>2.94</td> </tr> <tr> <td>3</td> <td>3.68</td> </tr> <tr> <td>4</td> <td>3.82</td> </tr> <tr> <td>(blank)</td> <td></td> </tr> <tr> <td>Grand Total</td> <td>2.67</td> </tr> </tbody> </table>	Row Labels	Average of Aggregate rating	1	2.00	2	2.94	3	3.68	4	3.82	(blank)		Grand Total	2.67																										
Row Labels	Average of Aggregate rating																																								
1	2.00																																								
2	2.94																																								
3	3.68																																								
4	3.82																																								
(blank)																																									
Grand Total	2.67																																								

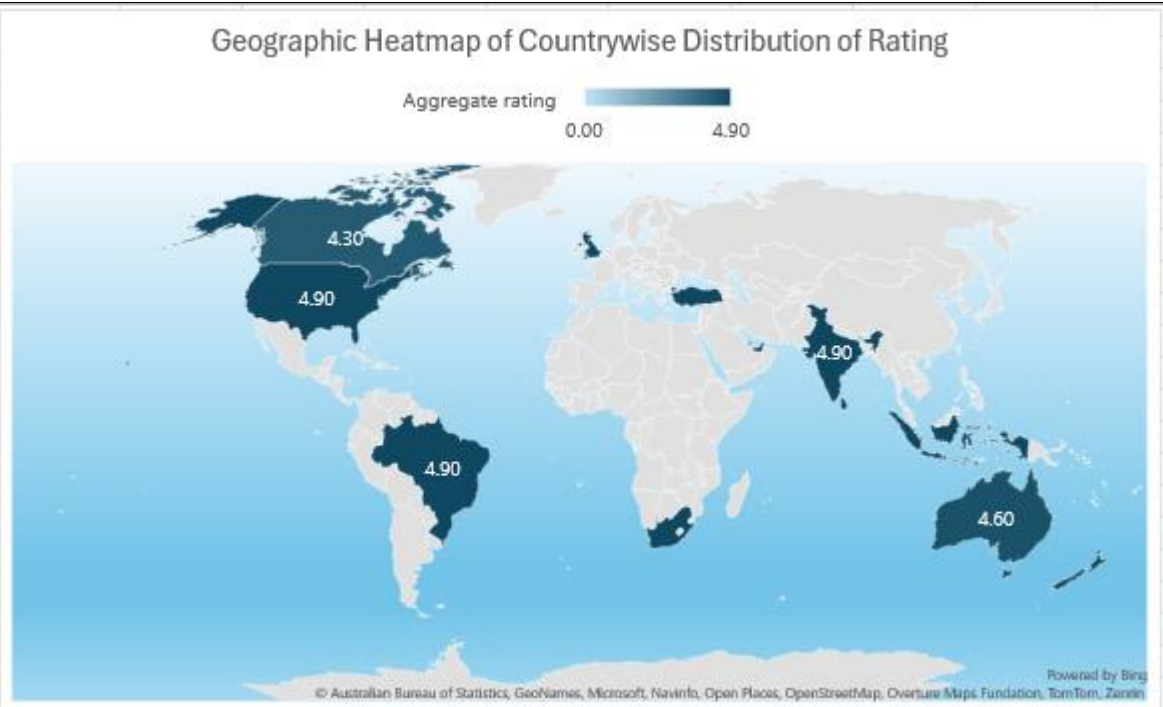

As seen below as Price Range Increases (from 1-low cost to 4-high end) Average Aggregate Rating (from 2 to 3.82) also increases.

Task 7

Task 7: Geographic Heatmap of Restaurant Density and Ratings
Scenario: Zomato's leadership team needs to understand how restaurant density and customer ratings are distributed geographically.
Steps: Use geographic data to create a heatmap showing restaurant density and customer satisfaction by city.
Deliverable: A geographic heatmap visualizing restaurant distribution and performance across cities.

Solution Task 7

Task 8

Task 8: Performance Comparison by Service Type (Online Delivery vs. Dine-In Only)

Scenario: Zomato wants to compare the performance of restaurants offering online delivery with those offering dine-in only.

Steps: Analyze ratings and votes for online delivery versus dine-in restaurants.

Deliverable: A comparison of restaurant performance by service type, highlighting how online delivery affects customer engagement.

Solution Task 8

Have created a Pivot Table with Filtering used to get Total Restaurant Number, Avg Rating and Sum of Votes.

Has Table booking	No	[-]		PLEASE CHOOSE-->	For Dine In Restaurant	Has Table booking	Yes
Has Online delivery	Yes	[-]				Has Online delivery	No
Row Labels		Average of Aggregate rating	Sum of Votes	Count of Restaurant ID	For Online Restaurant	Has Table booking	No
All Day 99	[-]	0	3	1		Has Online delivery	Yes
Bhashi Caterers		0	3	1			
44 Grills		0	0	1			
Chakhna		0	3	1			
Chawla Chik Inn		0	0	1			
Fire n Ice		0	1	1			

	Number	Sum of Av Aggregate Rating	Sum of Votes(IN '000)
Dine In Restaurant	723	3.35	202.58
Online Restaurant	2,016	3.17	311.59

Task 9

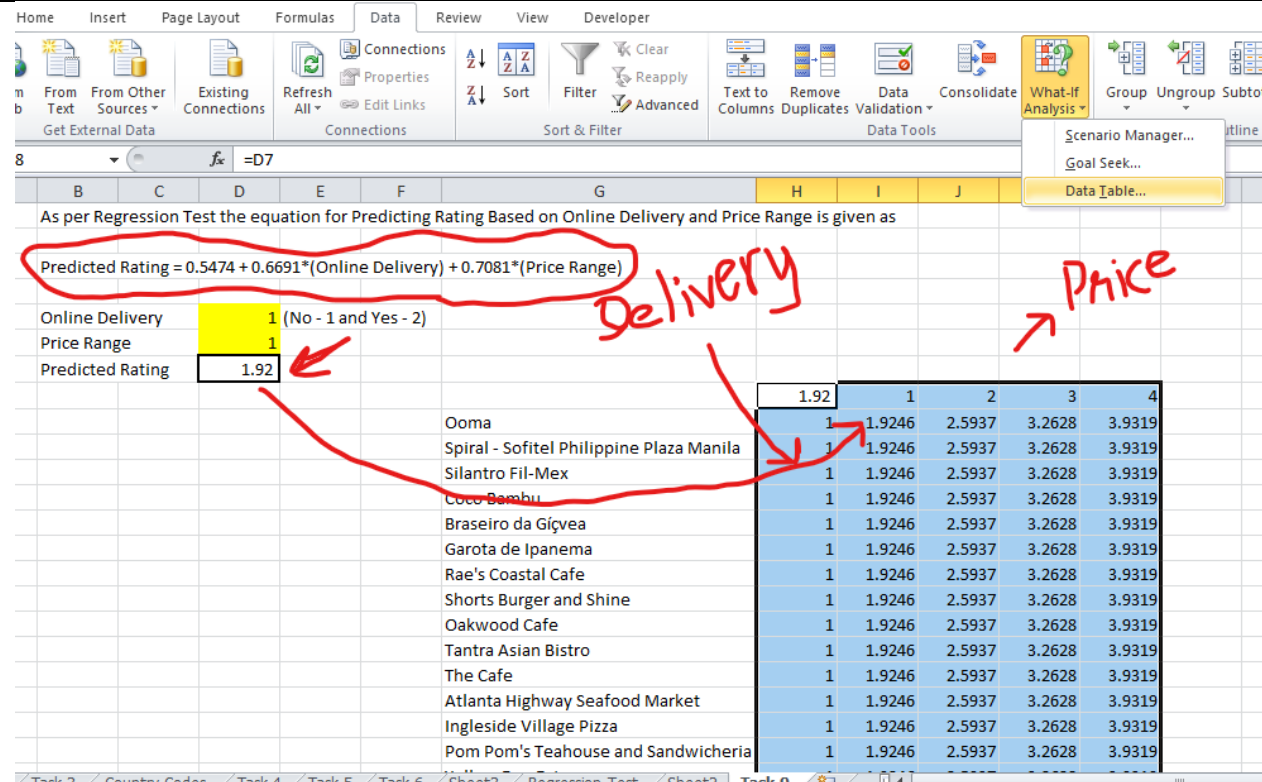

Task 9: What-If Analysis for Business Growth

Scenario: Zomato wants to forecast how changes, such as expanding online delivery or adjusting price ranges, might impact customer satisfaction.

Steps: Use What-If Analysis (Scenario Manager or Goal Seek) to simulate different business scenarios.

Deliverable: A report detailing the potential impact of changes in service offerings or price on customer satisfaction and engagement.

Solution Task 9

Using Regression analysis , we have found the equation predicting the rating for a particular restaurant based on Price Range (1 to 4) and Online Delivery presence (No -1 and Yes is 2).

We used What-if analysis to create Data Table having various scenario of Price Range (Column) and Online Presence(Row). We have found out that **Increased Online Presence increases the rating. Further Increased Price Range also increases the rating.** Below is the screenshot if every restaurant is made online(by changing to 2-yes) and its rating increases.

	<div><div><div><div><div>B</div><div>C</div><div>D</div><div>E</div><div>F</div><div>G</div><div>H</div><div>I</div><div>J</div><div>K</div><div>L</div><div>M</div></div><div>As per Regression Test the equation for Predicting Rating Based on Online Delivery and Price Range is given</div><div>Predicted Rating = 0.5474 + 0.6691*(Online Delivery) + 0.7081*(Price Range)</div><div>Online Delivery1 (No - 1 and Yes - 2)</div><div>Price Range1</div><div>Predicted Rating1.92</div></div><div><div><div>1.92</div><div>1</div><div>2</div><div>3</div><div>4</div></div><div><div>Ooma</div><div>Spiral - Sofitel Philippine Plaza Manila</div><div>Silantro Fil-Mex</div><div>Coco Bambu</div><div>Braseiro da Gijvea</div><div>Garota de Ipanema</div><div>Rae's Coastal Cafe</div><div>Shorts Burger and Shine</div><div>Oakwood Cafe</div><div>Tantra Asian Bistro</div><div>The Cafe</div><div>Atlanta Highway Seafood Market</div><div>Ingleside Village Pizza</div><div>Pom Pom's Teahouse and Sandwicheria</div></div><div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div><div>2</div></div><div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div><div>2.6327</div></div><div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div><div>3.3018</div></div><div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div><div>3.9709</div></div><div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div><div>4.64</div></div></div></div></div>																																							
Task 10	<div><div><div>Task 10: Adding Sparklines for Visualizing Trends</div><div>Scenario: Zomato needs to visualize trends in metrics like ratings and votes. Sparklines allow learners to visualize trends without needing full charts.</div><div>Steps: Add Sparklines to the dataset to visualize trends in restaurant performance.</div><div>Deliverable: Enhanced tables with Sparklines showing trends in customer ratings and votes.</div></div></div>																																							
Solution Task 10	<table><tr><td></td><td></td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td><td></td></tr><tr><td>Cafe Coffee Day</td><td>Rating</td><td>3.60</td><td>3.60</td><td>3.50</td><td>3.50</td><td>3.40</td><td>3.40</td><td>3.40</td><td>3.40</td><td>3.40</td><td>3.30</td><td></td></tr><tr><td></td><td>Votes</td><td>58.00</td><td>125.00</td><td>35.00</td><td>50.00</td><td>277.00</td><td>46.00</td><td>50.00</td><td>29.00</td><td>31.00</td><td>67.00</td><td></td></tr></table>			1	2	3	4	5	6	7	8	9	10		Cafe Coffee Day	Rating	3.60	3.60	3.50	3.50	3.40	3.40	3.40	3.40	3.40	3.30			Votes	58.00	125.00	35.00	50.00	277.00	46.00	50.00	29.00	31.00	67.00
